9. ☐ Other \_\_\_\_.

The following is an examiner's statement of reasons for allowance: Levitt (US 701586, figure 2) is the closest art of record and teaches a coupling member including a hook; a closure shaft, D, and a locking member, F, carried by the closure shaft and being movable between locked and unlocked positions by pulling the head outwardly.

In regard to claim 22, the difference it that the closing member of Levitt fails to have the subject matter of lines 15-19 as reproduced below:

a compression spring which biases the locking pin towards its locked position, the arrangement being such that the user, in use, presses the head inwardly relative to the actuator so that the locking pin moves in said third direction to its unlocked position so that the user can then slide the actuator in said second direction which moves the closure shaft in said first direction from its closed position to its open position.

The combined claimed structure of the compression spring, actuator and head require that the head be capable of being pressed inwardly relative to the actuator to slide the actuator. This is the opposite of the manner in which the device of Levitt operates wherein the head must be pulled outwardly to release the actuator. This combination structure claimed by applicant defines a very different coupling member in both structure and function from that of Levitt and there is no basis to modify the device of Levitt to have such structure.

As to claim 23, the difference it that the closing member of Levitt fails to have the subject matter of lines 15-18 as reproduced below:

wherein the body portion includes first and second complementary moulded body parts, wherein the complementary body parts are formed with first projections which cooperate with second projections formed on the actuator to define a key and keyway for constraining the actuator to sliding movement relative to the body portion in said second direction.

The combined claimed structure of the two complementary moulded body parts having first projections which cooperate with second projections formed on the actuator to define a key and keyway for constraining the actuator. This provides greater stability and the device of Levitt completely fails to have such structure and there is no basis to modify the device of Levitt to have such structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 22, 3-9, 12, 23 and 18-20, renumbered 1-13 respectively, are allowed.
